

Recommendations for the usage of COOL TOUCH UNLIMITED equipment

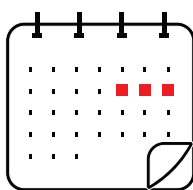

Make sure that your employees are properly trained to operate the equipment and know how to keep it in order!

This equipment allows users to consume unlimited amounts of pure fresh water and eliminate any concerns about ordering water, storing bottles or lifting heavy objects.

In order to ensure full equipment functionality and maintain a supply of high-quality drinking water, please keep in mind the following recommendations.

- Clean the outer casing (1) of the equipment daily with a health-friendly detergent.
- The water supply valve (2) has to be disinfected every day with a sanitary detergent that is safe to use with food products.
- Empty and wash the drip tank (3) every day.

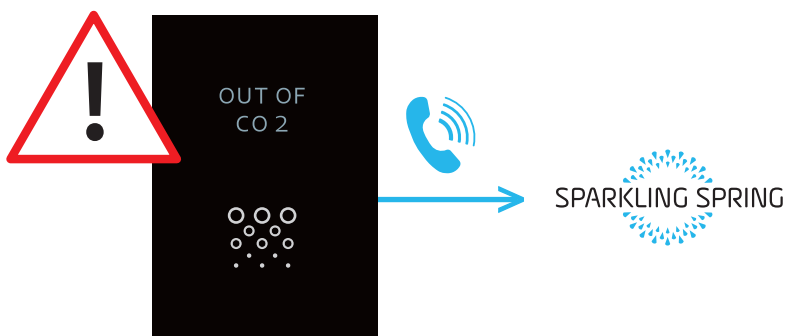

If the equipment has not been used for over 2 days, flush the system with no less than 3 litres of water before use.

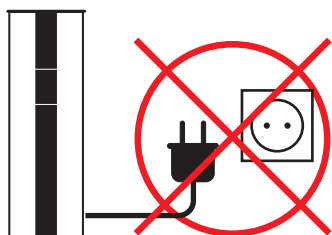

The equipment automatically controls the filter resource expenditure, and the "snowflake" pictogram indicator gives a timely notice of filter resource depletion. When the indicator starts blinking, the filter resource will last for 2-3 more weeks.

To renew the filter resource, please contact the "SPARKLING SPRING" service department!

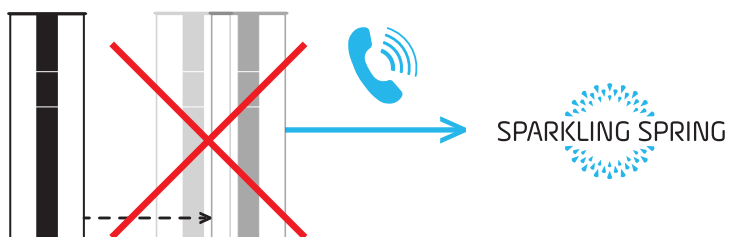

If your equipment has the CO2 option, always make sure that the equipment has a supply of CO2!

If the "OUT OF CO2" indicator lights up, please contact the "SPARKLING SPRING" service department to replace the gas cylinder!

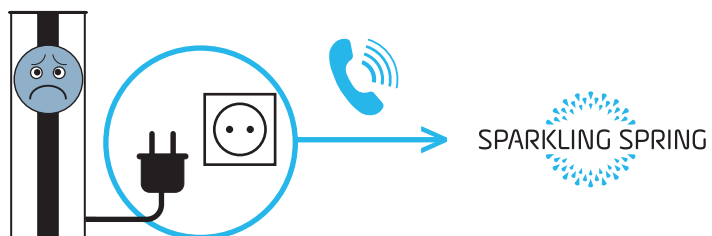

When the equipment is idle, it must not be disconnected from the power source for sanitary reasons.

Only the personnel of the "SPARKLING SPRING" service department may move the equipment.

If the equipment is out of use for over 10 days, we recommend contacting the "SPARKLING SPRING" service department for additional preventive maintenance.

If the equipment is damaged, disconnect it from the power source, shut off the water supply, and contact the "SPARKLING SPRING" service department!
